| Description | | | |
| <p>Hi All,</p> <p>I am currently trying to do multicast over ad-hoc network. I am unable to do multi-hop multicasting over batman. I wish to know how exactly to go about in solving the above stated problem. Batman scenario that i trying to do is as below.</p> <p>A->B->C</p> <p>here A, B and C belong to a multicast group. A and C dont have direct ad-hoc radio link, hence the nexthop to reach C is B. now i want to send multicast message to C via B. I wish to know solve this problem.</p> <p>Regards, Sharath</p> | | | |

batman-adv already supports this (multicast is handled as broadcast). There are also specific multicast optimizations which you can look at.
